ACKNOWLEDGEMENTS

The author expresses appreciation to all of the persons whose efforts contributed to the completion of this report. Particularly, the author acknowledges the efforts of Jim Collins, Carey Arthur, P. K. Doll, and R. E. Christy, who provided much information and guidance for this study; Vince Burgess, Mike Worthington, and Stuart Napier, who helped in its development; the members of the Safety Group, who helped in the planning and review of this report; Jeanne Roberts, who worked from handwritten material to prepare this report; the members of the Report Section, who readied this report for publication; and Margie Jernigan, whose support and confidence serve to encourage the author daily.

EXECUTIVE SUMMARY

Traffic safety efforts have been quite successful over the years in reducing the death toll on Virginia's roads and highways. The average number of persons killed annually in traffic crashes was down from approximately 1,180 between 1965 and 1969 to approximately 970 between 1980 and 1985. However, from 1982 to 1985, traffic crashes in Virginia rose 18.6%, and injuries and fatalities increased 25.0% and 11.2%, respectively.

In an attempt to combat these recent increases in crashes, injuries, and fatalities, the Transportation Safety Administration of the Virginia Department of Motor Vehicles (DMV) entered into an agreement in October of 1985 with the National Highway Traffic Safety Administration to initiate the Comprehensive Community-Based Traffic Safety Program. The comprehensive program relies on problem identification and program assessment in combining state and local resources to target traffic safety problems.

Two DMV districts, District 2 and District 7, were selected as pilot areas for implementation of the comprehensive program. In June of 1986, Phase I, the problem identification phase, was completed. Phase II, the program assessment phase, is designed to identify community resources and address the recommendation made in Phase I that initial countermeasures should target the program areas of occupant protection, alcohol, selective enforcement, and pedestrian safety. Programs and organizations identified through Phase II were compiled into resource inventories, which are found in Appendix B for District 2 and Appendix C for District 7.

FINAL REPORT

THE COMPREHENSIVE COMMUNITY-BASED TRAFFIC SAFETY PROGRAM PHASE II: PROGRAM ASSESSMENT FOR DISTRICT 2 AND DISTRICT 7

by

Jack D. Jernigan
Research Scientist

INTRODUCTION

Traffic safety efforts have been quite successful over the years in reducing the death toll on Virginia's roads and highways. The average number of persons killed annually in traffic crashes was down from approximately 1,180 between 1965 and 1969 (Virginia Department of State Police [VSP], 1985) to approximately 970 between 1980 and 1985 (Virginia Department of Motor Vehicles [DMV], 1986). Moreover, because there are more vehicles logging more miles today than during the 1960's, the average annual death rate per 100 million vehicle miles of travel has been cut more than 50%, from approximately 5.0 during the latter 1960's (VSP, 1985) to 2.4 during the 1980's (DMV, 1986). Clearly many factors are involved in this dramatic reduction in traffic fatalities, but much of the reduction is the result of a comprehensive effort to improve traffic safety through promoting emergency medical services and through promoting safer vehicles, roadways, and drivers.

Although the history of traffic safety improvements is impressive, recent trends may signal that increased efforts are needed. From 1982 to 1985, traffic crashes in Virginia rose 18.6% and injuries and fatalities increased 25.0% and 11.2%, respectively (DMV, 1986). In fact, annual traffic injuries rose more than 50% from 48,144 in 1974 (VSP, 1985) to 74,585 in 1985 (DMV, 1986).

Unfortunately, these recent increases have occurred at a time when traffic safety dollars, along with monies for many governmentally supported programs, are at a premium. Hence, targeting monies where they will have the greatest potential impact has become of paramount importance.

Currently, traffic safety programs are initiated at the local level, which, in theory, gives localities the freedom to match countermeasure programs to local needs. Yet this approach dictates that localities have adequate data and resources available to identify crash problems and judge the impact of countermeasure programs. In fact,

adequate data and resources historically have been either inadequate or nonexistent. Thus, one failing of the current system is that it is virtually impossible to determine whether priority traffic safety problems are being addressed in an effective manner, if at all.

In October of 1985, the Transportation Safety Administration (TSA) of the DMV entered into an agreement with the National Highway Traffic Safety Administration (NHTSA) to initiate the Comprehensive Community-Based Traffic Safety Program (CCBP). The CCBP is designed to combat the shortcomings of the current system by combining state and local resources to identify crash problems in localities and to rank those problems according to the order in which they need to be addressed. Further, the CCBP relies on identifying current countermeasure programs, concerned organizations and individuals, as well as other potential resources and then building upon them.

Two DMV districts, District 2 and District 7, were selected as the pilot areas for implementation of the CCBP. In June of 1986, the initial problem identification phase of the CCBP was completed by the Virginia Transportation Research Council (VTRC) for the TSA/DMV using only data available at the state level (Jernigan, 1986b). In the second phase of the CCBP, community resources were identified to supplement the initial problem identification findings. By knowing which programs and organizations are promoting traffic safety, the CCBP can build upon existing networks.

In a time of financial belt tightening, building upon existing resources is attractive because community resources can be identified more easily and less expensively than they can be developed. In addition, an assessment of these community resources permits monies to be targeted where they might have the greatest potential impact by identifying programs and organizations that have shown an active interest in promoting traffic safety.

The major objectives of the Phase II of the CCBP are to supplement the recommendations of Phase I by:

1. Identifying local resources (e.g., programs, organizations, individuals) in DMV District 2 and District 7 that have the potential to promote traffic safety.
2. Providing a brief administrative assessment of organizations and programs concerned with promoting traffic safety.
3. Identifying local data sources that could help pinpoint high-accident locations and other traffic safety problems in urban areas.

METHODOLOGY

The initial step of this phase of the CCBP was to define an optimal set of data that could be used in meeting the objectives of this project and those of the CCBP. Referring to the needs identified in Phase I of the program (Jernigan, 1986b) and to guidelines established by the NHTSA (1985), the researcher developed a needs list for this phase of the CCBP. The transportation safety administrator, the transportation safety planner, the transportation safety program evaluation manager, and the DMV district managers and transportation safety field coordinators from the two pilot districts reviewed the list, collectively met with the researcher, and agreed upon the needs list contained in Appendix A.

Because the areas of occupant protection, alcohol, selective enforcement, and pedestrian safety were targeted in Phase I (Jernigan, 1986b), it was determined that the data search should concentrate on but not be limited to these areas of emphasis. Further, it was decided that rather than develop and administer a questionnaire, interviews should be used to gather the desired information. This strategy would allow key individuals to be recruited during the initial contact to support the program. Hence, because of the critical dual role of the initial communication, the TSA/DMV decided that no effort should be made to acquire information from within the localities except by the state coordinator and the field representatives of the CCBP. Thus, the data used in this report were acquired solely from statewide representatives of agencies and programs of interest, published sources, and the transportation safety field coordinators.

Because the VTRC did not contact individuals and organizations within the pilot districts, the state coordinator and field representatives of the comprehensive program have been given the responsibility of providing an administrative assessment of key organizations and programs concerned with promoting traffic safety. The comprehensive program's staff is also responsible for identifying local data sources that could help pinpoint high accident locations and other traffic safety problems in urban areas. However, the VTRC is to provide an inventory of organizations, programs, and key individuals interested in promoting traffic safety. The resource inventory for District 2 is displayed in Appendix B, and the one for District 7 in Appendix C. Each district's inventory is subdivided into the different target areas in which each organization has an interest.

To further aid in the development of the CCBP, the VTRC provided the TSA/DMV with a summary evaluation of how to plan, fund, and implement effective selective traffic enforcement projects (Jernigan, 1986a). The VTRC also wrote an abridgement of an evaluation by the University of

North Carolina Highway Safety Research Center (Lacey et al., 1986) on the effectiveness of several alcohol countermeasures and distributed that report to the TSA/DMV.

FINDINGS

The data indicate that occupant protection has received much attention in each of the two pilot districts. Hospitals, especially, are involved in programs making child safety seats available on loan. A report by the Virginia Commonwealth University Transportation Safety Training Center (TSTC) identified nine hospitals in District 2 and eight in District 7 as having such a program (Frank, 1985). Further, both districts have had some occupant protection activity involving public information and education.

Many alcohol countermeasures are ongoing throughout these districts, and throughout the Commonwealth. Each locality is covered under an Alcohol Safety Action Program (ASAP), that represents one of the more comprehensive alcohol countermeasure efforts in the nation. In addition, both districts have community groups which promote activities aimed at reducing the incidence of drinking and driving.

Several communities within the pilot districts have received Selective Traffic Enforcement Program (STEP) grants in recent years. Since FY 1982, speed STEP grants have been awarded to Franklin County, Lynchburg, Roanoke County, and the towns of Rocky Mount and Vinton in District 2, and to Chesapeake, Norfolk, Portsmouth, and Virginia Beach in District 7. However, three successive years of speed STEP evaluations for fiscal years 1982, 1983, and 1984 indicated that many projects did not concentrate enforcement efforts on sites, days, and times that presented an identifiable crash problem (Sharkey, 1987; Sharkey & Stoke, 1985; Stoke, Atkins, & Caudell, 1985). Thus, although some localities may be familiar with selective enforcement projects, work may be needed to assist enforcement officials in targeting specific offenses, locations, days, and times (Jernigan, 1986a).

In both districts, the American Automobile Association (AAA) is heavily involved in promoting pedestrian safety. Because most pedestrian deaths nationwide occur in urban areas, the AAA has chosen to concentrate its efforts in pedestrian safety in urban areas only. Further, much of the pedestrian safety effort involves providing public information and education, particularly through the schools.

DISCUSSION

It is apparent that promoting the use of safety belts and child safety seats continues to provide a tremendous opportunity for enhancing traffic safety. Stoke (1986) found that in Virginia the percentage of drivers using safety belts has increased each year since 1983. By 1986 the statewide driver safety belt use-rate was 35.5%; however, the driver use-rate in DMV District 2 was only 26.7%. Thus, much work needs to be done in District 2 if safety belt use is to approach the state average. Further, even though the driver use-rate of 33.9% for DMV District 7 is comparable to the state average, almost two thirds of the drivers surveyed in that district were not observed to be wearing their safety belts. Hence, both districts show a need for increased safety belt use.

Another reason why promoting occupant protection should be a primary area of emphasis for the comprehensive program is that Virginia's Mandatory Safety Belt Use Law (MUL) is to become effective in January of 1988. Grey (1985) found that both vigorous public information and education (PI&E) activities and strict enforcement of the law are necessary to get the greatest benefit from the MUL. Thus, the CCBP has the opportunity to enhance the potential effectiveness of the MUL by using its resources to promote safety belt use through PI&E strategies and through encouraging enforcement of the law.

A further occupant restraint issue that needs to be addressed is the proper installation of child safety seats. Though almost 70% of all children under the age of 4 were found to be restrained by child safety seats (Stoke, 1986), the preliminary results of a study conducted by the TSTC indicate that as many as 80% of the seats are not properly installed. Hence, the proper installation and use of child safety seats, although perhaps not a large enough problem to warrant independent attention by the CCBP, might be effectively incorporated with the promotion of the MUL and safety belt use.

Another legislative initiative may aid the comprehensive program in combating driving under the influence. During the 1987 Session, the General Assembly passed a landmark piece of legislation aimed at combating drug-impaired driving. Effective in April of 1988, police will be able to require a driver to submit to a blood test to determine the drug content of his or her blood. The legislation also makes it an offense to operate a motor vehicle under the influence of alcohol and/or drugs to a degree that impairs one's ability to drive safely. Promoting this legislation among the public and among the officials it affects provides the opportunity to combat drug-impaired driving and reemphasize the alcohol-impaired driving problem. These areas should not only be discussed with the police, but also with prosecutors, the courts, and citizen activist groups. Thus, the entire transportation safety system should be encouraged to continue and increase its efforts in the battle against driving under the influence.

Selective enforcement is one method that can be used to deter drug-impaired and alcohol-impaired driving, as well as offenses such as excessive speed and disobeying traffic control devices. Selective enforcement can be effective, but projects must be well-planned and well-executed. Numerous evaluations have found that effective projects concentrate on offenses, sites, days, and times that present identifiable crash problems (Jernigan, 1986a). Projects that do not target and systematically attack a community's most pronounced crash problems have little chance of saving lives or preventing injuries in that community. Hence, it is imperative that selective enforcement be strategically planned to target the worst problems of a community.

In addition to establishing countermeasure programs in the areas of occupant protection, alcohol, selective enforcement, and pedestrian safety, Phase I recommended that the CCBP work to establish a Citizen Advisory Committee (CAC) and a traffic safety hot line in each of the two pilot districts (Jernigan, 1986b). Although CAC's have the advantage of promoting two-way communication and citizen participation in a program, they also have the disadvantage of possibly being used to delay action (McDowell, 1986). Further, if the CAC's are to be used effectively, the sponsoring agency must be committed to working with the committee and being responsive to the committee's recommendations (Wulkan and Hoover, 1986). Obviously, the CCBP cannot implement each of the recommendations of a CAC per se; but it must at least be willing to consider the recommendations and implement them where feasible.

The researcher recommends that the initial efforts of the CCBP be directed toward establishing a district-wide CAC with representatives of key organizations and priority localities. Later, sub-committees could be established for the various communities and/or traffic safety problems, but the district-wide committee would provide both continuity and stability for the program.

It is important that the CAC's work cooperatively with the local communities, organizations, and agencies, particularly the local Transportation Safety Commissions. Hence, all entities that might be affected by the CCBP and its programs should be included in the planning efforts as early as possible. Even the simple task of keeping these entities informed will help prevent giving the impression that the CCBP is forcing unwanted or unnecessary activity on the respective entity.

In terms of promoting public input into the program, the researcher recommends that the CCBP encourage the development of a traffic safety hot line modeled after the one in operation at The Fairfax Journal. If the CCBP staff can convince the local print media to implement such a hot line, citizen input into traffic safety would be encouraged. Such a hot line would also assist in fostering a close working relationship between the media and the comprehensive program. Further, a hot line run by the print media would have the added benefit of involving the private sector in an ongoing operation to promote traffic safety. Thus,

a hot line modeled after the one in place at The Fairfax Journal has the potential to survive without federal assistance.

RECOMMENDATIONS

The researcher recommends that the CCBP staff:

- o Initiate the program by contacting and recruiting key individuals in organizations listed in Appendix B and Appendix C.
- o Contact and recruit other concerned individuals and organizations to supplement those listed in the resource inventories.
- o Establish a citizen advisory committee in each of the pilot districts.
- o Initiate program activity first in the localities identified in Phase I as high priorities.
- o Initiate occupant protection programs.
- o Initiate programs aimed at combating alcohol-impaired driving.
- o Aid in the development of selective enforcement designed to target pronounced crash problems associated with identifiable offenses, sites, days, and times.
- o Aid in the establishment of a traffic safety hot line through the local print media.

APPENDIX A
PROGRAM ASSESSMENT NEEDS LIST

PROGRAM ASSESSMENT NEEDS LIST

I. Community Information

- A. Who are the members of the local transportation safety commissions?
 - 1. Names, addresses, and phone numbers of members.
 - 2. Positions held on commission (chairman, secretary, etc.).
 - 3. Business, agency, and community affiliations of members.
 - 4. How often does each commission meet?
- B. Are there other coordinating or advisory groups?
 - 1. What are those groups?
 - 2. Who sponsors them?
 - 3. How is each used?
 - 4. How often do they meet?
 - 5. Contact person (name, address, phone number).
- C. What groups, businesses, or agencies have shown an interest in promoting traffic safety?
 - 1. Name of group, business, or agency.
 - 2. What is each interested in doing?
 - 3. Contact person (name, address, phone number).
- D. In urban areas, what local police departments keep location-specific data on crashes in their communities?
 - 1. For each department, who is in charge of keeping the data (name, address, phone number)?
 - 2. What type of system is used (computer, pin map, etc.)?
 - 3. Are summary reports of the data available?
 - 4. Are the data available?
- E. Who should be contacted if a roadway, traffic signal, traffic sign, or some fixed object needs attention (i.e., who is in charge of reporting and/or correcting engineering problems)?
 - 1. Name, address, and phone number of person(s) responsible.
 - 2. Position held.

II. Alcohol

- A. Which localities have special DUI enforcement efforts?
 - 1. Locality.
 - 2. Type of program and goal of program.

3. Dates of implementation and termination.
 4. Contact person (name, address, phone number).
- B. Who has sponsored or may sponsor DUI educational programs?
1. Groups, agencies, and businesses that have shown an interest in sponsoring DUI educational programs.
 2. Type of program and goal of program.
 3. Dates of implementation and termination.
 4. Participation levels.
 5. Contact person (name, address, phone number).
- C. What are the local alcohol treatment programs?
1. ASAP
 - a. Directors (name, address, phone number).
 - b. Participation levels.
 2. Other programs.
 - a. Name of program.
 - b. Sponsor.
 - c. Type of program and goal of program.
 - d. Dates of implementation and termination.
 - e. Participation levels.
 - f. Contact person (name, address, phone number).
- D. Other groups concerned with combating DUI.
1. Group, business, or agency.
 2. How interested in combating DUI?
 3. Contact person (name, address, phone number).
- E. Other countermeasure programs which combat DUI.
1. Sponsor.
 2. Type of program and goal of program.
 3. Dates of implementation and termination.
 4. Participation levels.
 5. Contact person (name, address, phone number).
- F. Drunken Driving Media Campaigns
1. Sponsoring agencies (media or other).
 2. Type of coverage or type of program.
 3. Dates of implementation and termination.
 4. Contact person (name, address, phone number).

III. Occupant Protection

A. Employer Programs

1. Sponsor.
2. Type of program.
3. Dates of implementation and termination.
4. Participation levels.
5. Contact person (name, address, phone number).

B. Community Programs

1. Sponsor.
2. Type of program.
3. Dates of implementation and termination.
4. Participation levels.
5. Contact person (name, address, phone number).

C. Child Restraint Loaner Programs

1. Sponsor.
2. Number of seats available.
3. Does program have an educational component?
4. Participation levels.
5. Contact person (name, address, phone number).

D. Safety Belt Awareness Programs

1. Sponsor.
2. Type of program and goal of program.
3. Dates of implementation and termination.
4. Participation levels.
5. Contact person (name, address, phone number).

E. Media Campaigns

1. Sponsor.
2. Type of campaign.
3. Media used.
4. Dates of implementation and termination.
5. Contact person (name, address, phone number).

IV. Police Traffic Services

A. Crash Investigation Policies

1. Locality.
2. When are reports completed?

- a. When filled out?
 - b. When turned in?
 3. Contact person (name, address, phone number).
- B. Which localities run selective-enforcement programs?
1. Locality.
 2. What offenses are selectively enforced?
 3. How often used?
 4. Where used?
 5. Times of day and days of weeks used.
 6. Dates of implementation and termination.
 7. Are efforts advertised?
 8. Contact person (name, address, phone number).
- C. What crash investigation training is given local enforcement officials?
1. Locality.
 2. Type of training.
 3. Who gets it?
 4. Are there refresher courses?
 - a. Are they required?
 - b. How often are refresher courses given?
 5. Content of training (emphasis areas).
 6. Length of training course.
 7. Contact person (name, address, phone number).
- D. Public Information and Education
1. Are special enforcement efforts publicized?
 - a. In which localities?
 - b. Which efforts are publicized?
 - c. Publicity used.
 - d. Media used.
 - e. Type of advertisement used.
 - f. Publicity used over what time frame?
 3. Are there other public information and education efforts?
 - a. Type of program and goal of program.
 - b. Dates of implementation and termination.
 4. Contact person (name, address, phone number).

V. Emergency Medical Services (EMS)

- A. What is the local fatal/injury ratio?
- B. What is the local average response time?
- C. Is there a local EMS plan?
 - 1. Where does one exist?
 - 2. What is the plan?
 - 3. Contact person (name, address, phone number).
- D. In what communities does "911" operate?
- E. What types of EMS training are available?
 - 1. Who gets it?
 - 2. Content of training.
 - 3. Length of training.
 - 4. How often are people retrained?
 - 5. Contact person (name, address, phone number).
- F. What emergency equipment is available?
 - 1. Types available (trucks, ambulances, cardiac units, etc.).
 - 2. How much equipment is available?
 - 3. How much equipment/population?
 - 4. How much equipment/square mile?
 - 5. Contact person (name, address, phone number).
- G. Where are the trauma facilities located?
 - 1. Which hospitals?
 - 2. Is there a helicopter available?
 - 3. What special services, equipment, and training are available?
 - 4. Contact person (name, address, phone number).
- H. What are the public information programs in use?
 - 1. Media Campaigns
